

# ANCHOR

## Access to Naloxone, Care, Harm Reduction, Outreach, and Recovery

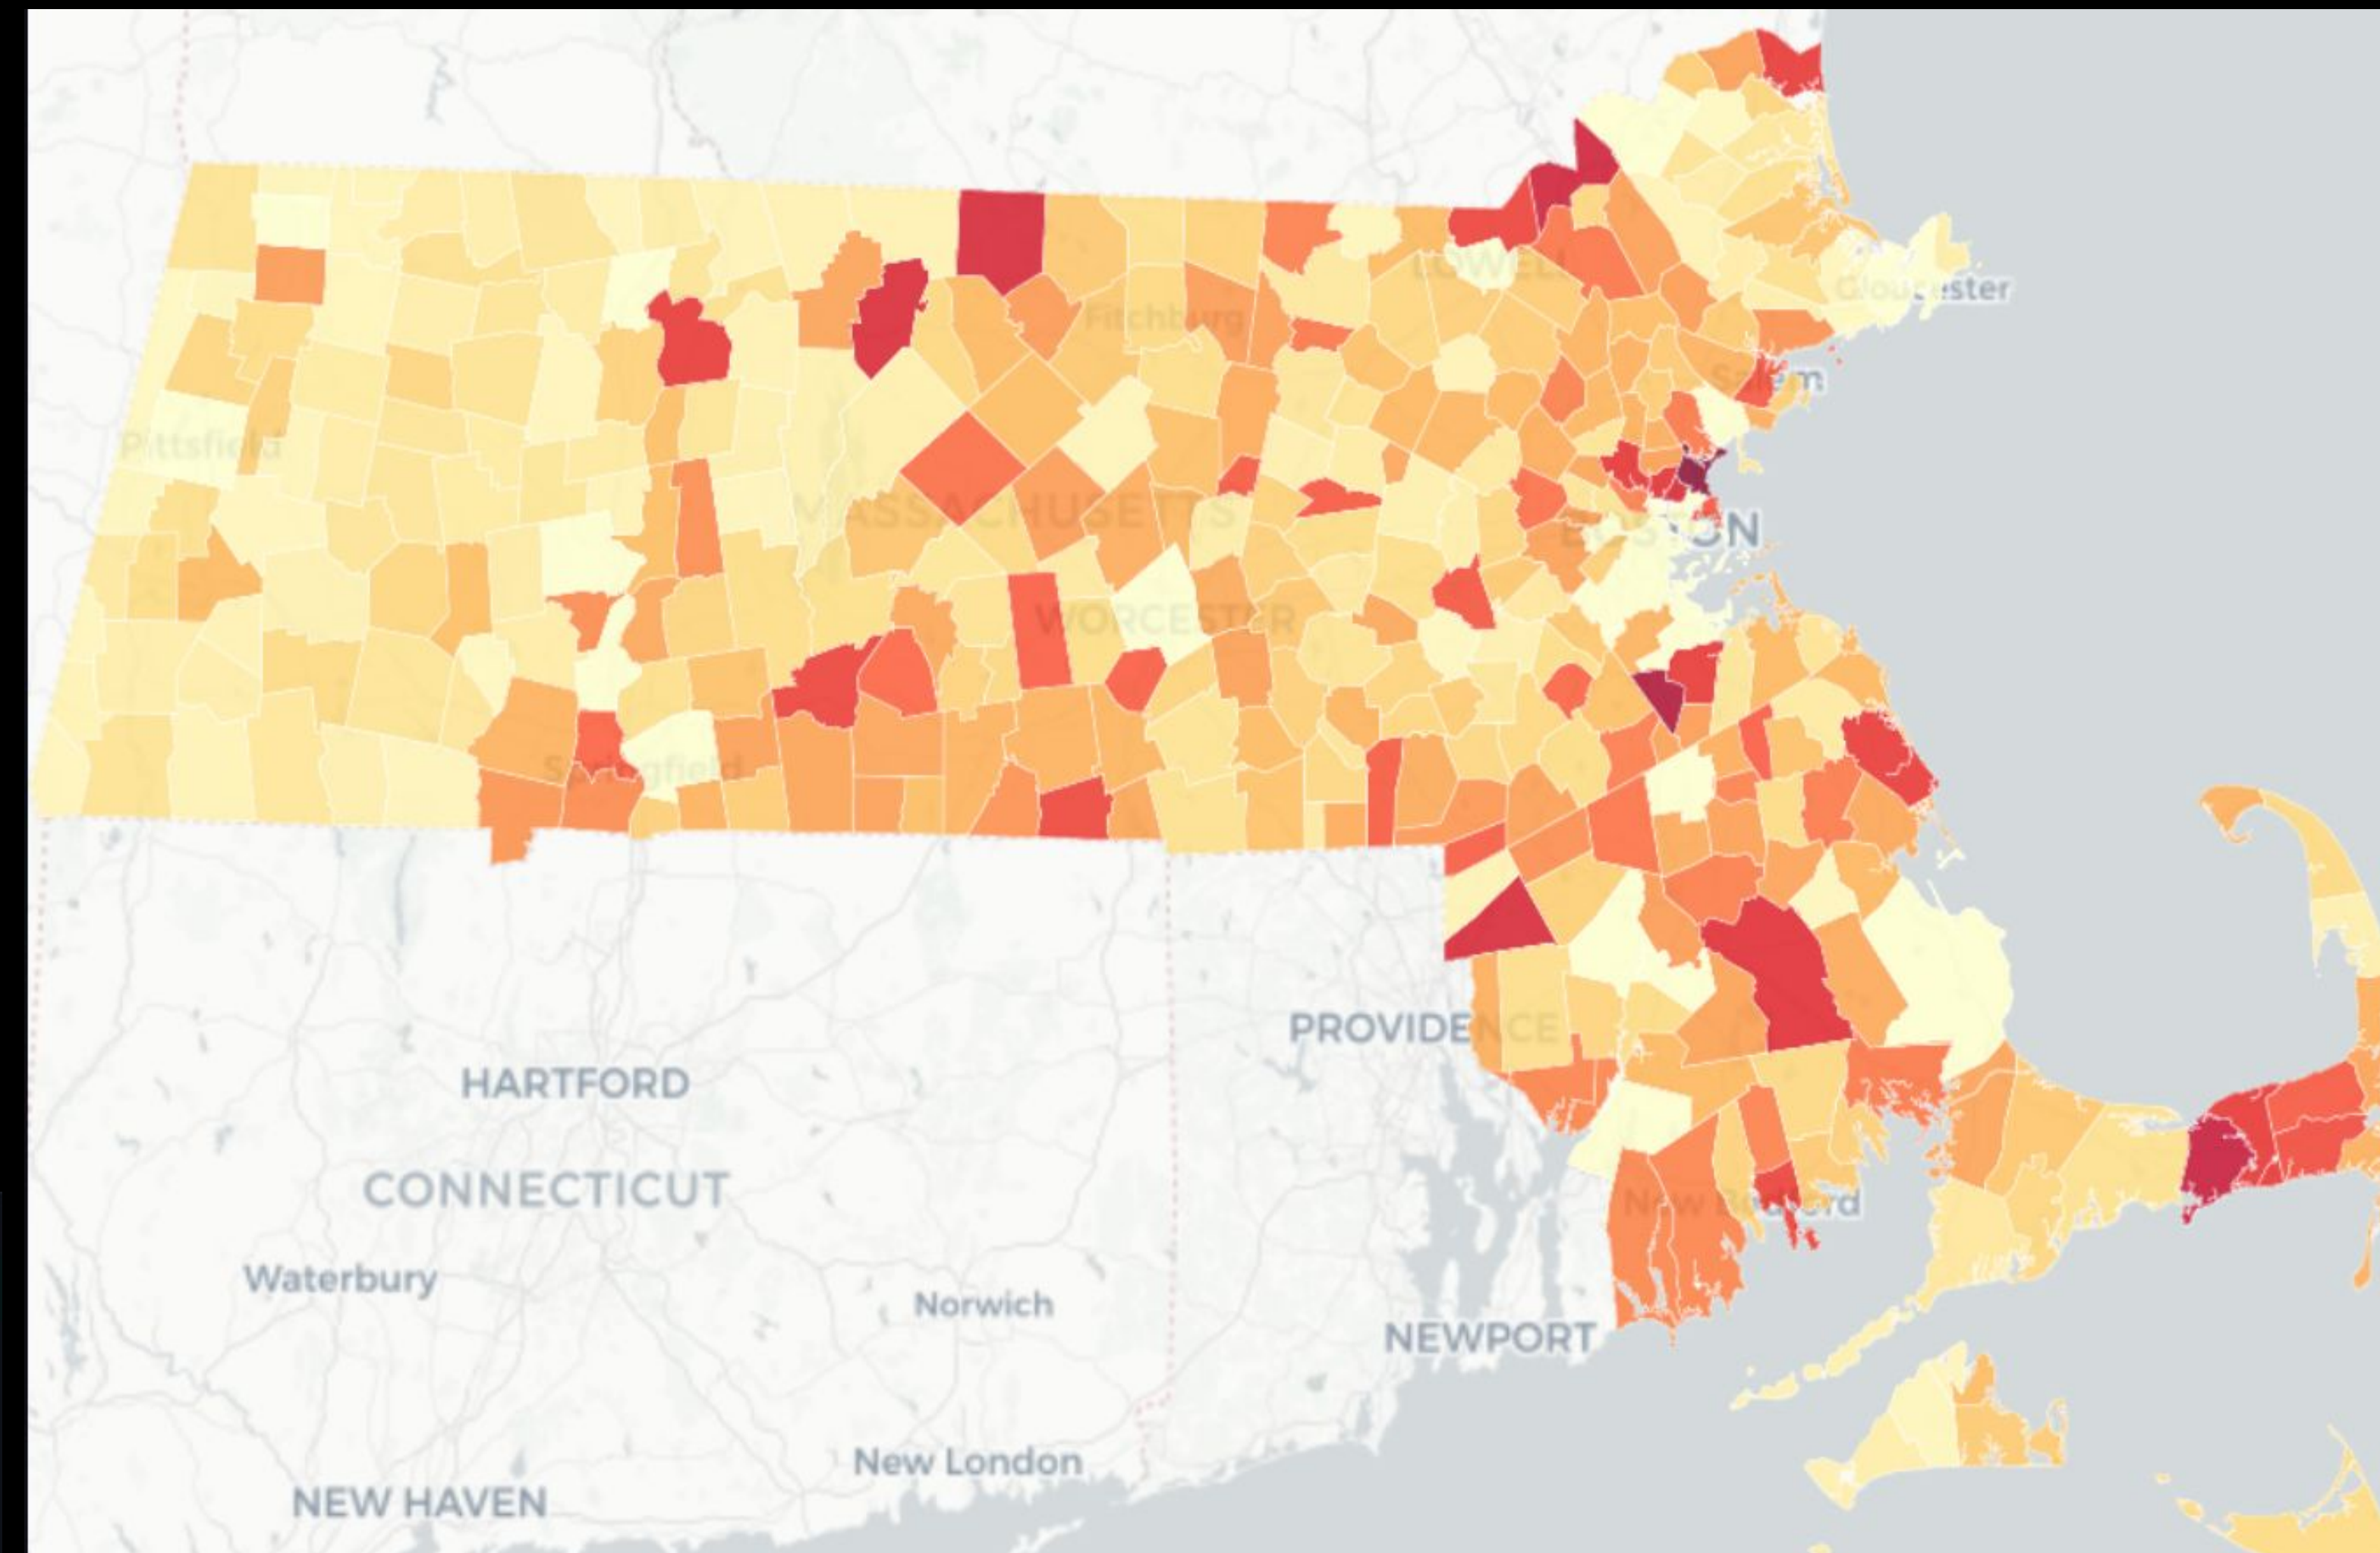

*A Massachusetts dashboard linking overdose burden, social vulnerability, and source-listed service visibility.*

[Explore Dashboard](#)

**Background:** Overdose burden and access to harm reduction supports vary across Massachusetts communities. Publicly available datasets can help identify where overdose burden, social vulnerability, and limited source-listed service visibility may overlap.

**Objective:** Build an exploratory municipality-level dashboard to support harm reduction outreach planning, naloxone access review, and further local validation.

### A. MUNICIPALITY-LEVEL ANCHOR PRIORITY SCORES ACROSS MASSACHUSETTS

#### Data Inputs

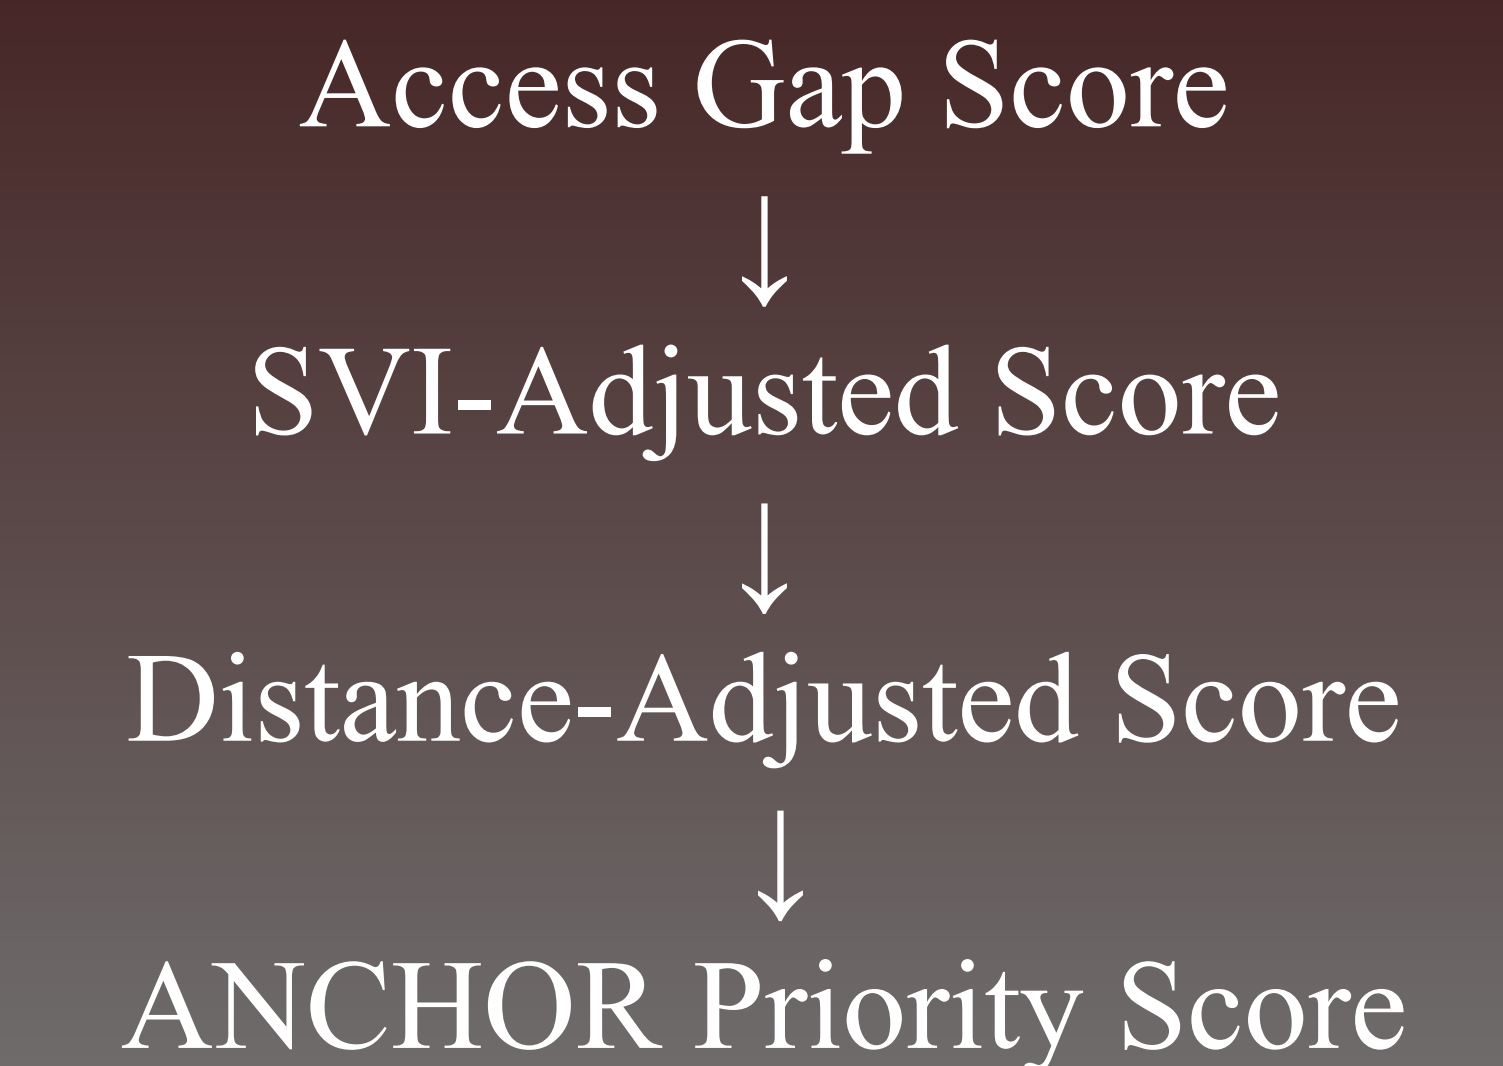

ANCHOR integrates publicly available municipality-level and geospatial datasets, including:

- Overdose deaths by city/town
- EMS incident data
- CDC/ATSDR Social Vulnerability Index
- Massachusetts municipal boundaries
- Source-listed treatment, peer recovery, syringe service, and harm reduction resources.

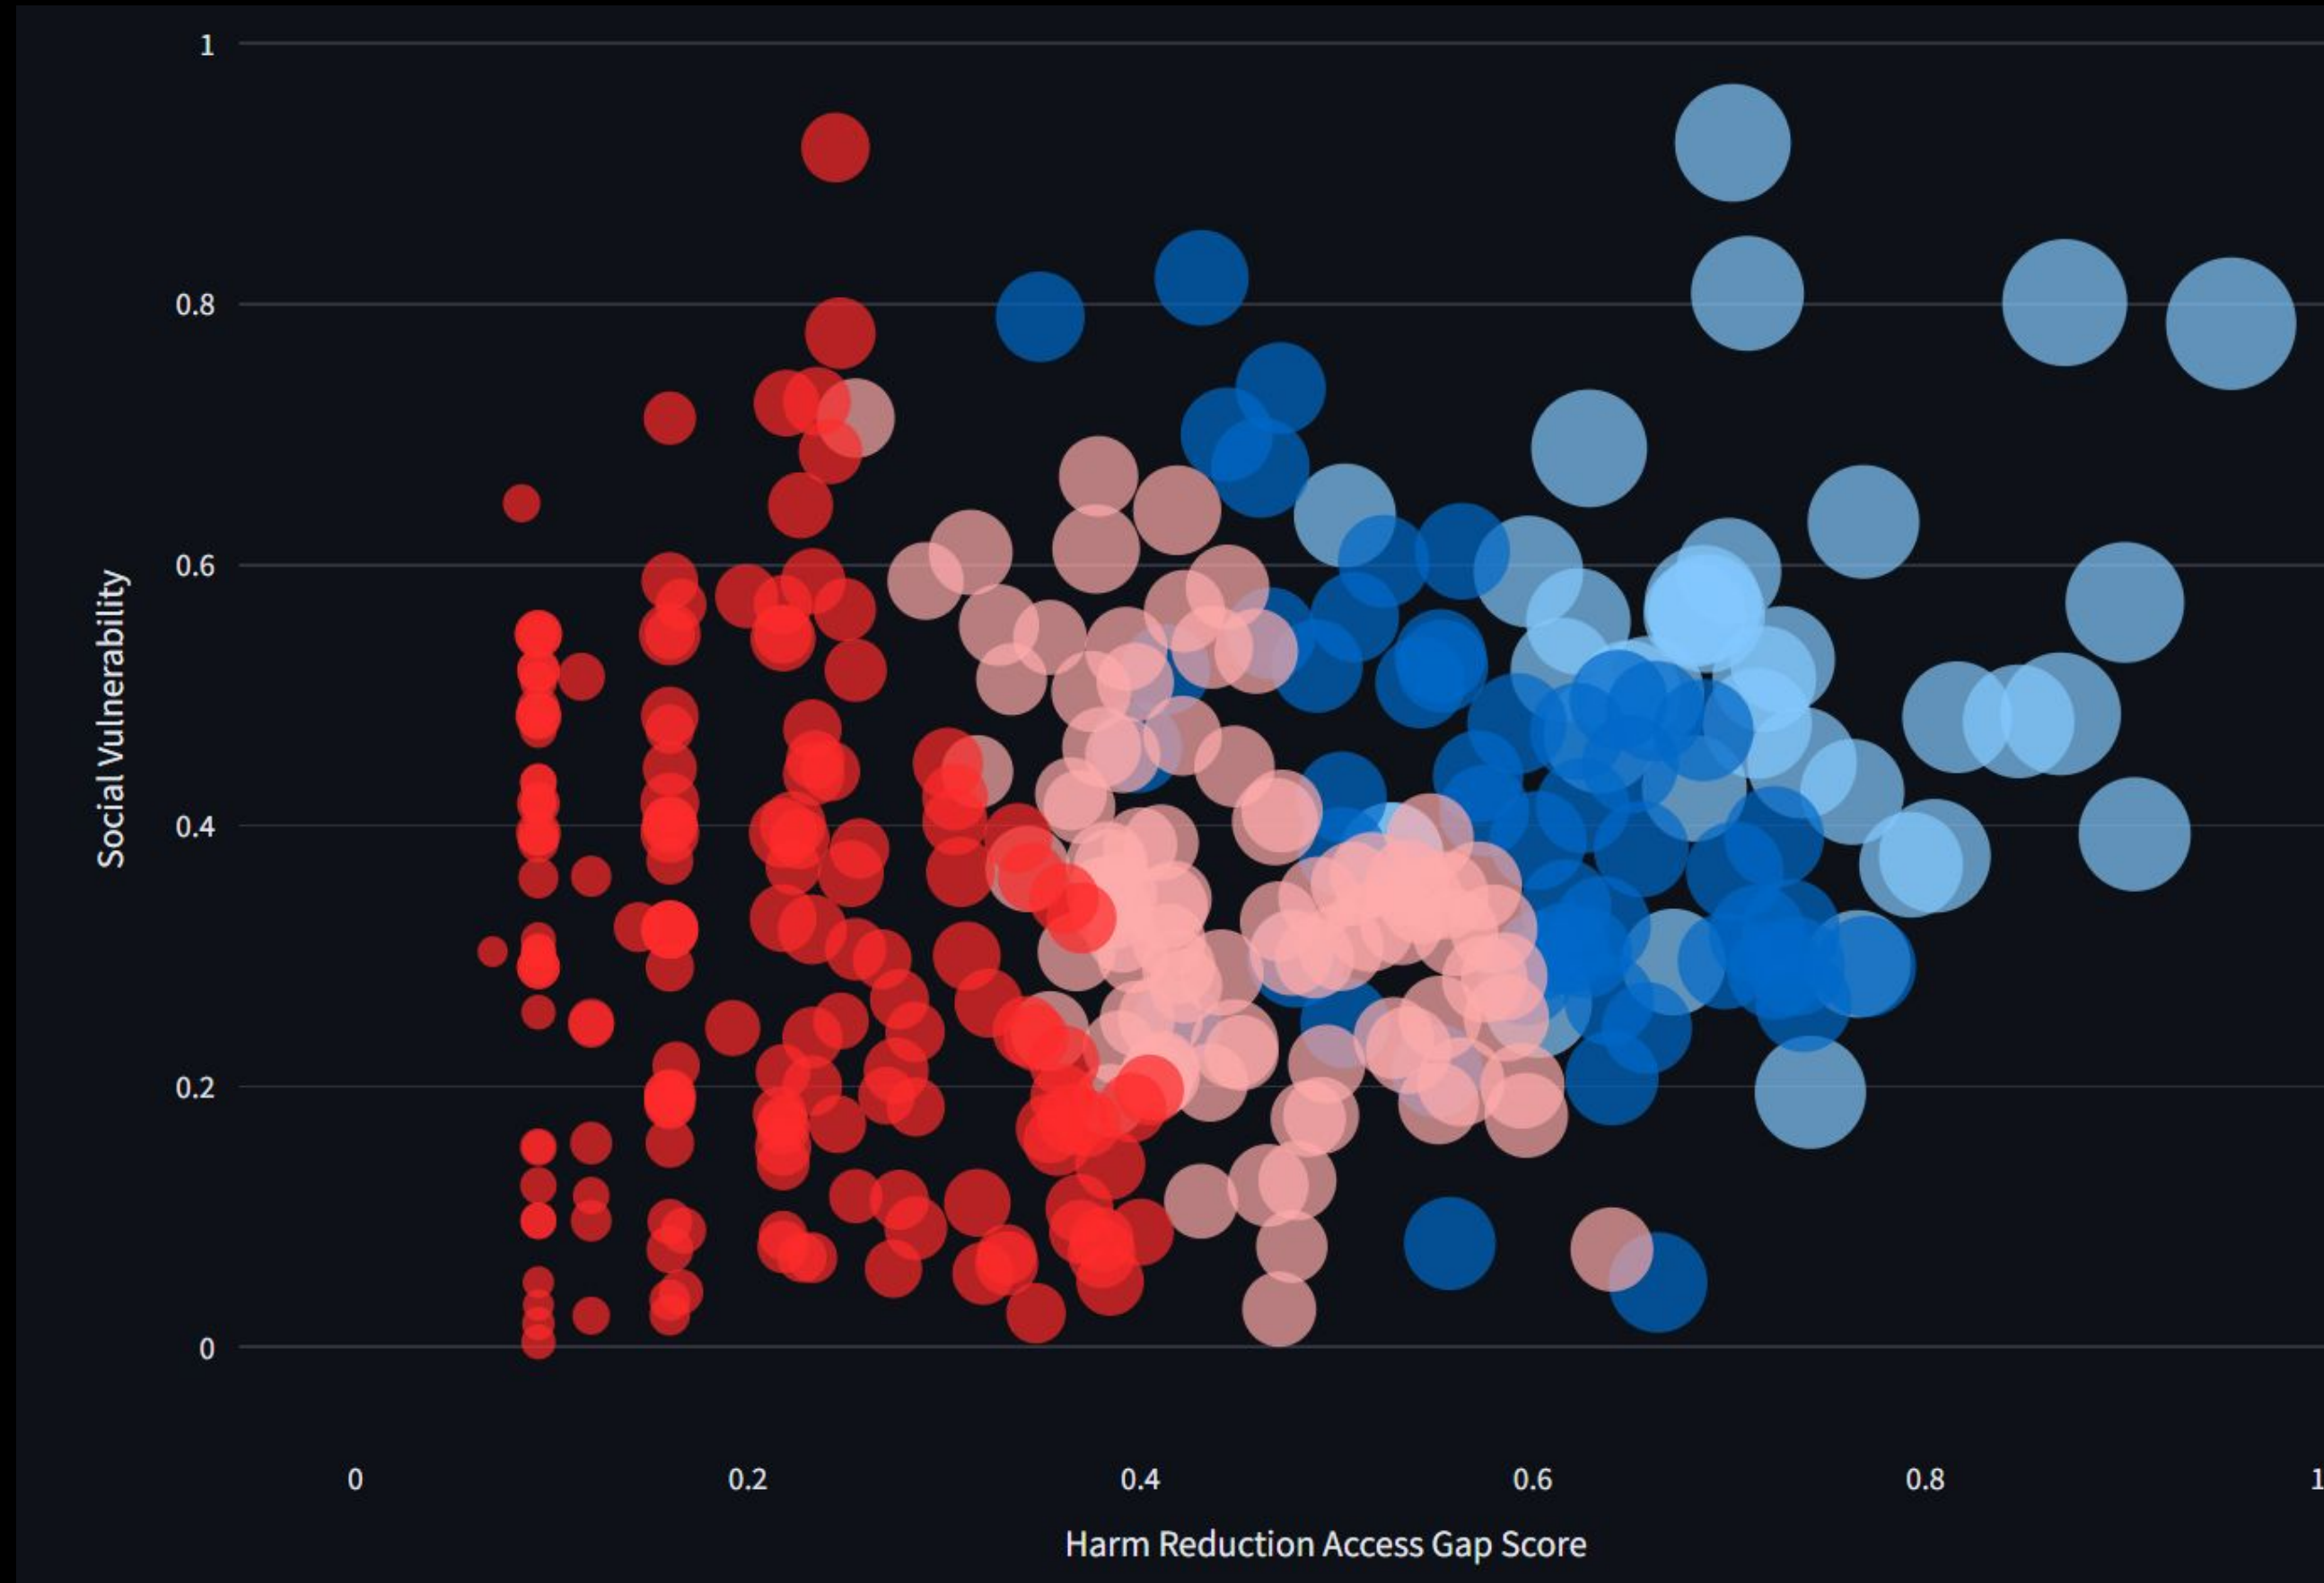

#### The ANCHOR Priority Score

$$APS = [\text{Burden} \times (1 - \text{In-Town Source-Listed Access}) \times (1 + \text{Social Vulnerability})] \times (1 - 0.35 \times \text{Nearby Access})$$

### ANCHOR Scoring Workflow

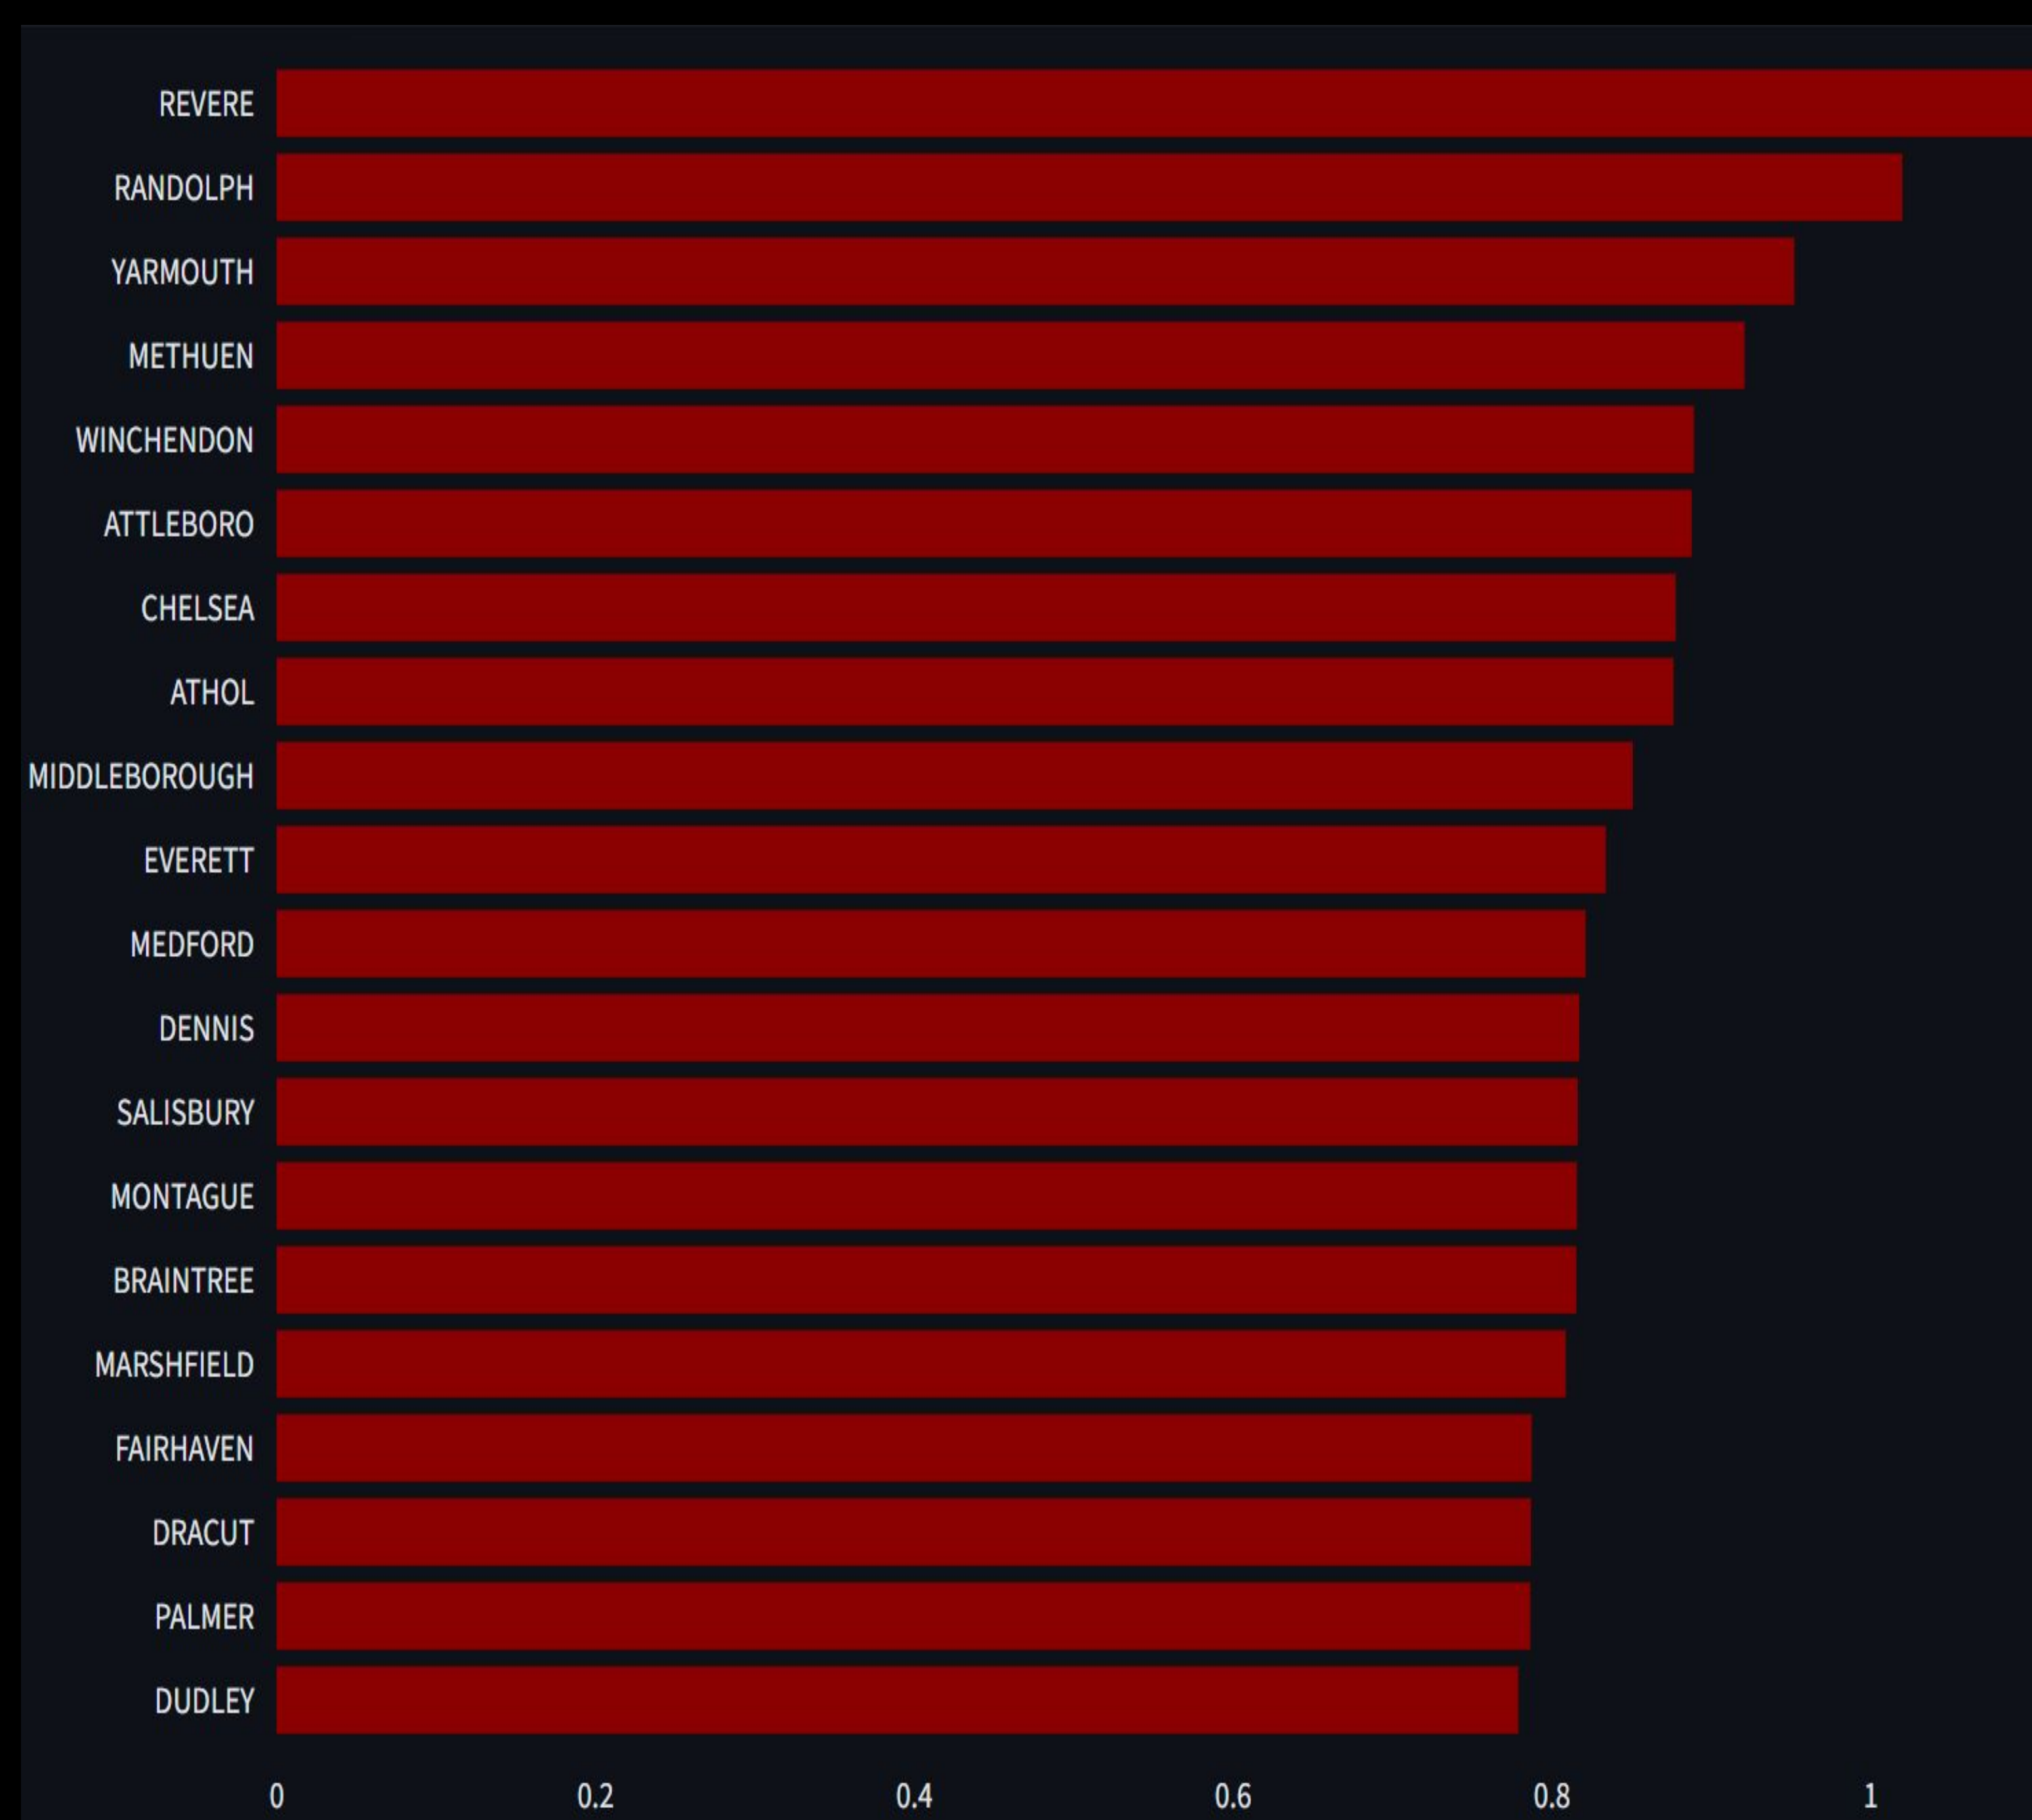

### C. ACCESS GAP & SOCIAL VULNERABILITY

#### Key Takeaways

- ANCHOR brings overdose burden, EMS burden, social vulnerability, and source-listed service access indicators into one municipality-level dashboard.
- The dashboard helps identify communities that may warrant closer review for harm reduction outreach, naloxone access, and service visibility planning.
- Priority scores should be interpreted as exploratory screening indicators, not definitive evidence of service absence or policy need.

### B. TOP 20 COMMUNITIES BY PRIORITY SCORE

#### Limitations

- Service listings are source-listed and incomplete.
- Zero tracked listings should not be interpreted as no local services.
- Some organizations may be listed under parent agencies/ nearby municipalities.
- Distance does not capture transportation access, eligibility, service hours, capacity, stigma, or service fit.
